

# Welcome and Introduction

SteemSTEM visit, September 20, 2018

**Nicolas Arnaud** ([narnaud@lal.in2p3.fr](mailto:narnaud@lal.in2p3.fr))

Laboratoire de l'Accélérateur Linéaire (CNRS/IN2P3 & Université Paris-Sud)

European Gravitational Observatory (Consortium, CNRS & INFN)

# Welcome!

- Welcome to the **European Gravitational Observatory (EGO)**
  - **Site of the Virgo experiment**
- Virgo is a **giant** (3-km arms) **suspended** and **recycled Michelson interferometer** designed to make **direct detections of gravitational wave (GW) signals**
- **Advanced Virgo (AdV)** is the second generation Virgo detector
  - **5-year upgrade** followed by a **successful data taking period in August 2017** and a **new upgrade period ongoing until the end of the year**
  - **Ultimate goal: improve the overall sensitivity by one order of magnitude**
- **Advanced Virgo joined the two Advanced LIGO (aLIGO) detectors on August 1, 2017** for a **first common data taking period**
  - **Until August 25, 2017**
  - **Two major detections: GW170814 and GW170817**
- **Currently: commissioning period**, following another **major upgrade of the detector**
  - **Goal: improve the sensitivity by a factor  $\sim 2$**
  - **Target: new joint LIGO-Virgo data taking period starting early 2019**

# Outline

- Your **visit**
- The **Virgo collaboration**
- A few words about **EGO**
- A quick overview of our research field
  - **Detecting and studying gravitational waves**  
→ **Multi-messenger astronomy**
  - A glimpse of the **future**

# Program of today's visit

- **Indico** page: <https://events.ego-gw.it/indico/conferenceDisplay.py?confId=71>

## SteemSTEM community

chaired by Nicolas Arnaud (LAL (CNRS/IN2P3 & Université Paris-Sud))

Friday, 21 September 2018 from **08:00** to **20:00** (Europe/Rome)  
at **EGO, Virgo site**

**Material** [A selection of educational resources in English](#) [Risorse didattiche in Italiano](#) [Virgo news](#)  
[Virgo public website](#) [Virgo status](#) [h -- The Gravitational Voice](#)

### Friday, 21 September 2018

10:00 - 10:30	Welcome, presentation of the visit and of EGO 30' Speaker: Dr. Nicolas Arnaud (LAL (CNRS/IN2P3 & Université Paris-Sud))
10:30 - 11:30	Conference 1h0' Speaker: Dr. Valerio Boschi
11:30 - 13:00	Tour of the facility 1h30' Speaker: Dr. Valerio Boschi
13:00 - 13:45	Q&A session 45' Speakers: Dr. Nicolas Arnaud (LAL (CNRS/IN2P3 & Université Paris-Sud)), Dr. Valerio Boschi, Antonino Chiummo, Gary Hemming, Giuseppe Di Biase
13:45 - 14:45	Lunch at the EGO canteen

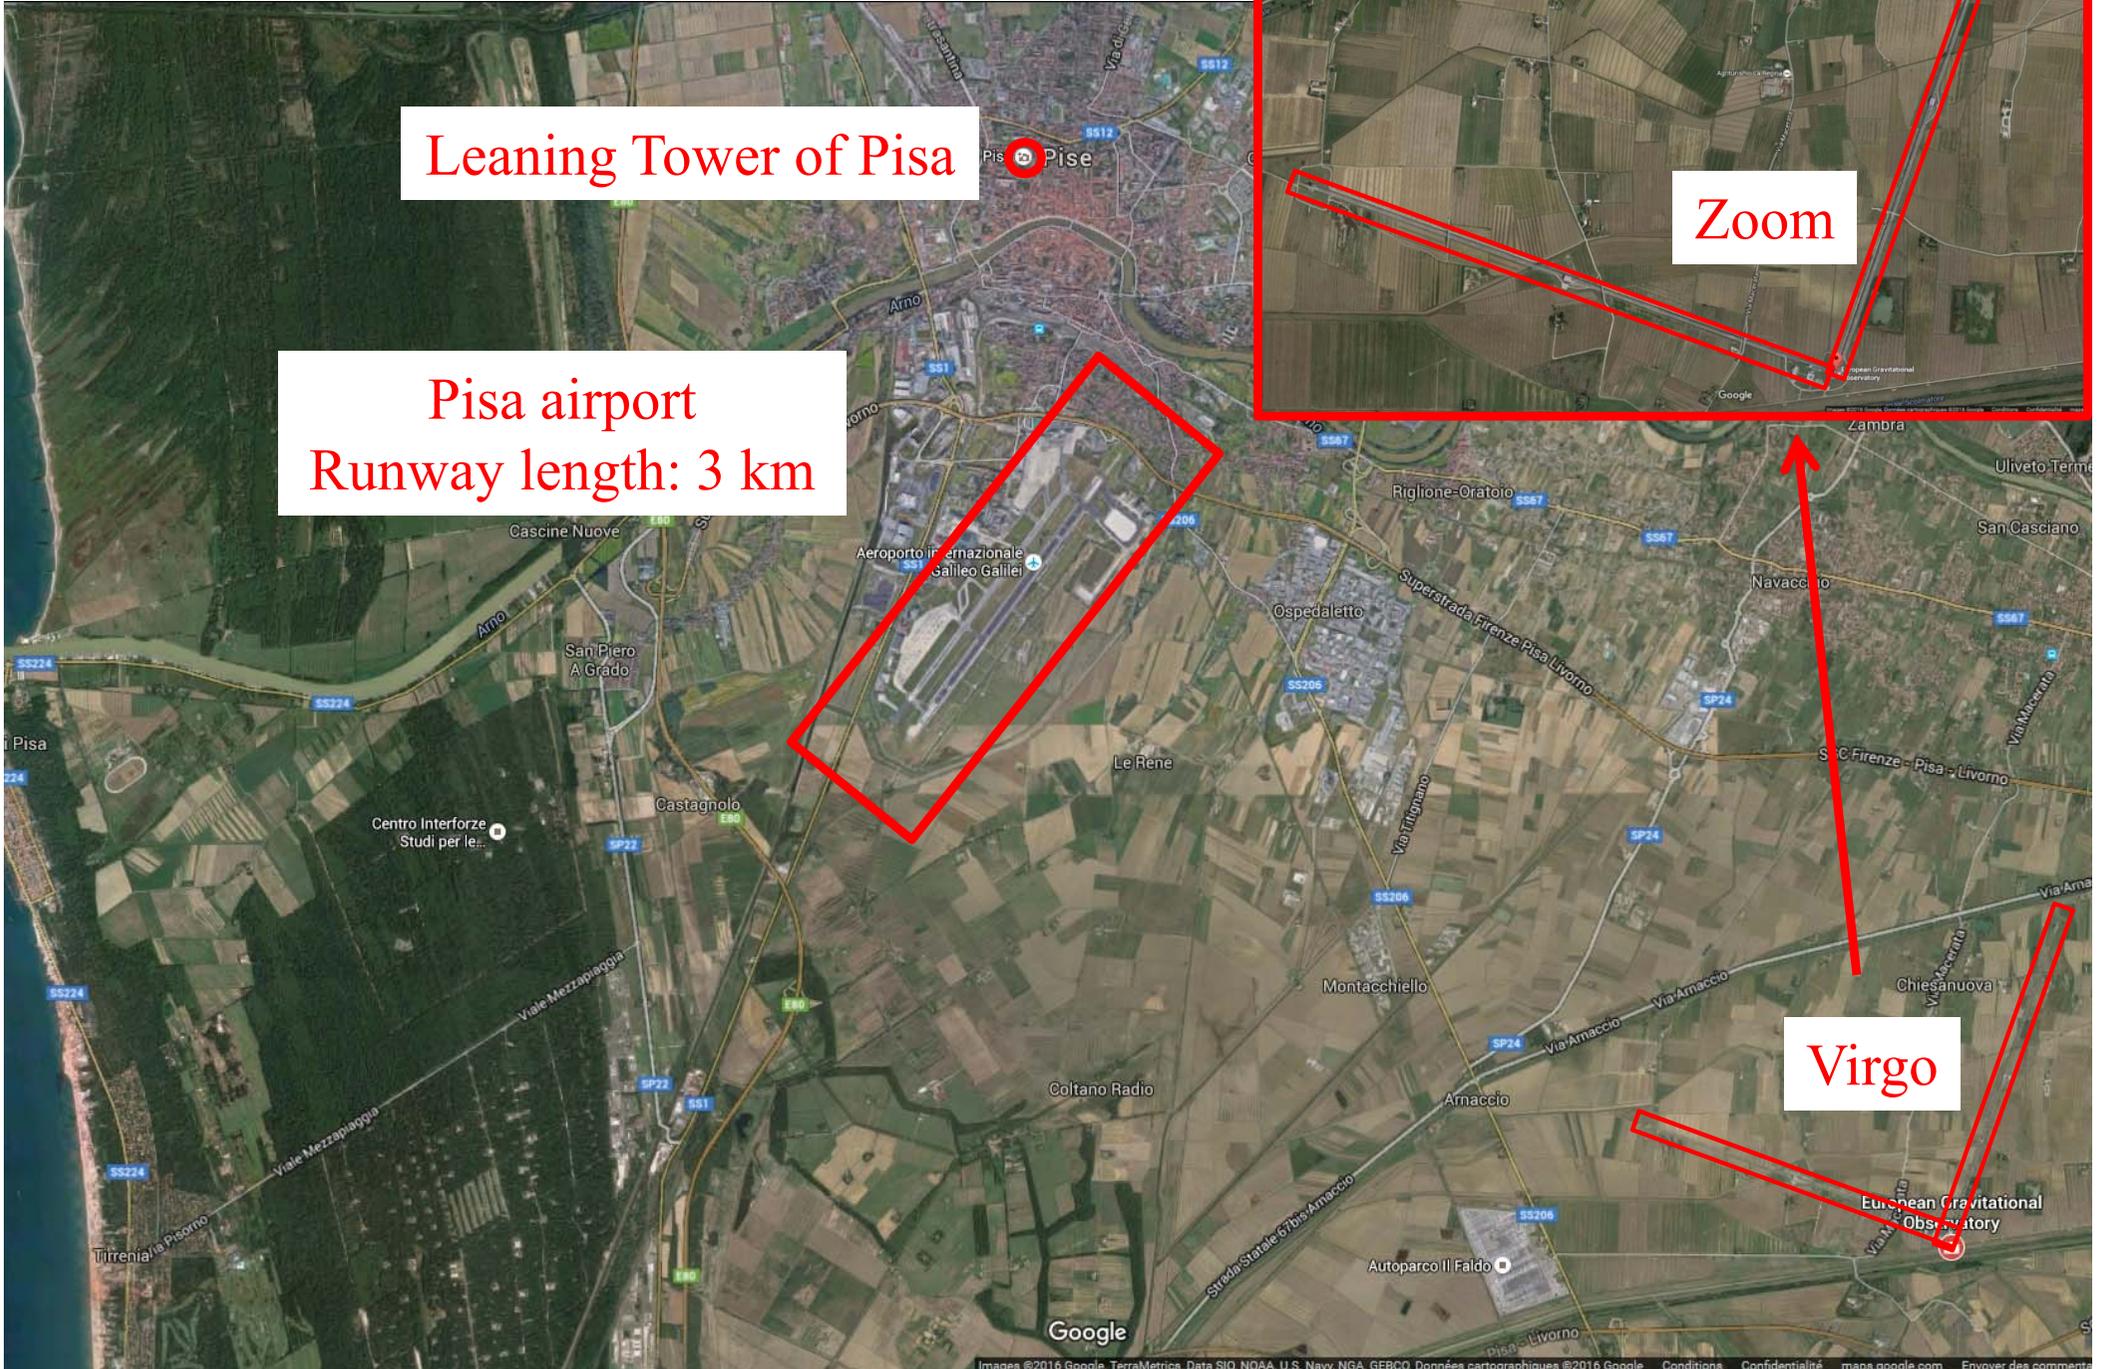

# The Virgo site

Leaning Tower of Pisa

Runway length: 3 km

Zoom

Virgo

# Virgo from the sky

# The Virgo Collaboration

- 7 European countries

- 20+ groups

- About 300 members (LIGO: 750)

# The Virgo Collaboration

- 7 European countries

- 20+ groups

- About 300 members (LIGO: 750)

- Virgo was built by 11 CNRS (France) and INFN (Italy) laboratories

- Budget: ~150 M€

- Groups from the Netherlands, Poland, Hungary, Spain and Belgium joined later the project

- Advanced Virgo funding: ~20 M€

- Plus in-kind contribution from NIKHEF (NL)

- The EGO (European Gravitational Observatory) consortium is managing the Virgo site in Cascina. It provides the infrastructures and resources to ensure the detector construction and operation

# A bit of history

- 1980's: Collaboration between **Alain Brillet** (CNRS, Orsay, lasers) and **Adalberto Giazotto** (INFN, Pisa, suspensions)
- 1989: **Proposal**
- June 27 1994: **Project approved** by CNRS and INFN
- May 1997: Final **design report**
- 2003: **End of construction phase**
- 2007-2010: **Data taking periods**
  - Virgo first, then Virgo+
- 2011-2016: **Upgrade to Advanced Virgo**
  - **2015: first direct detections of gravitational waves**
    - Data recorded by Advanced LIGO, jointly analyzed by LIGO and Virgo
- 2016-2017: **Advanced Virgo commissioning**
- 2017: **First joint Advanced LIGO – Advanced Virgo data taking period**
  - **August 2017: first detections** by the **LIGO-Virgo 3-detector network**

# EGO organization chart

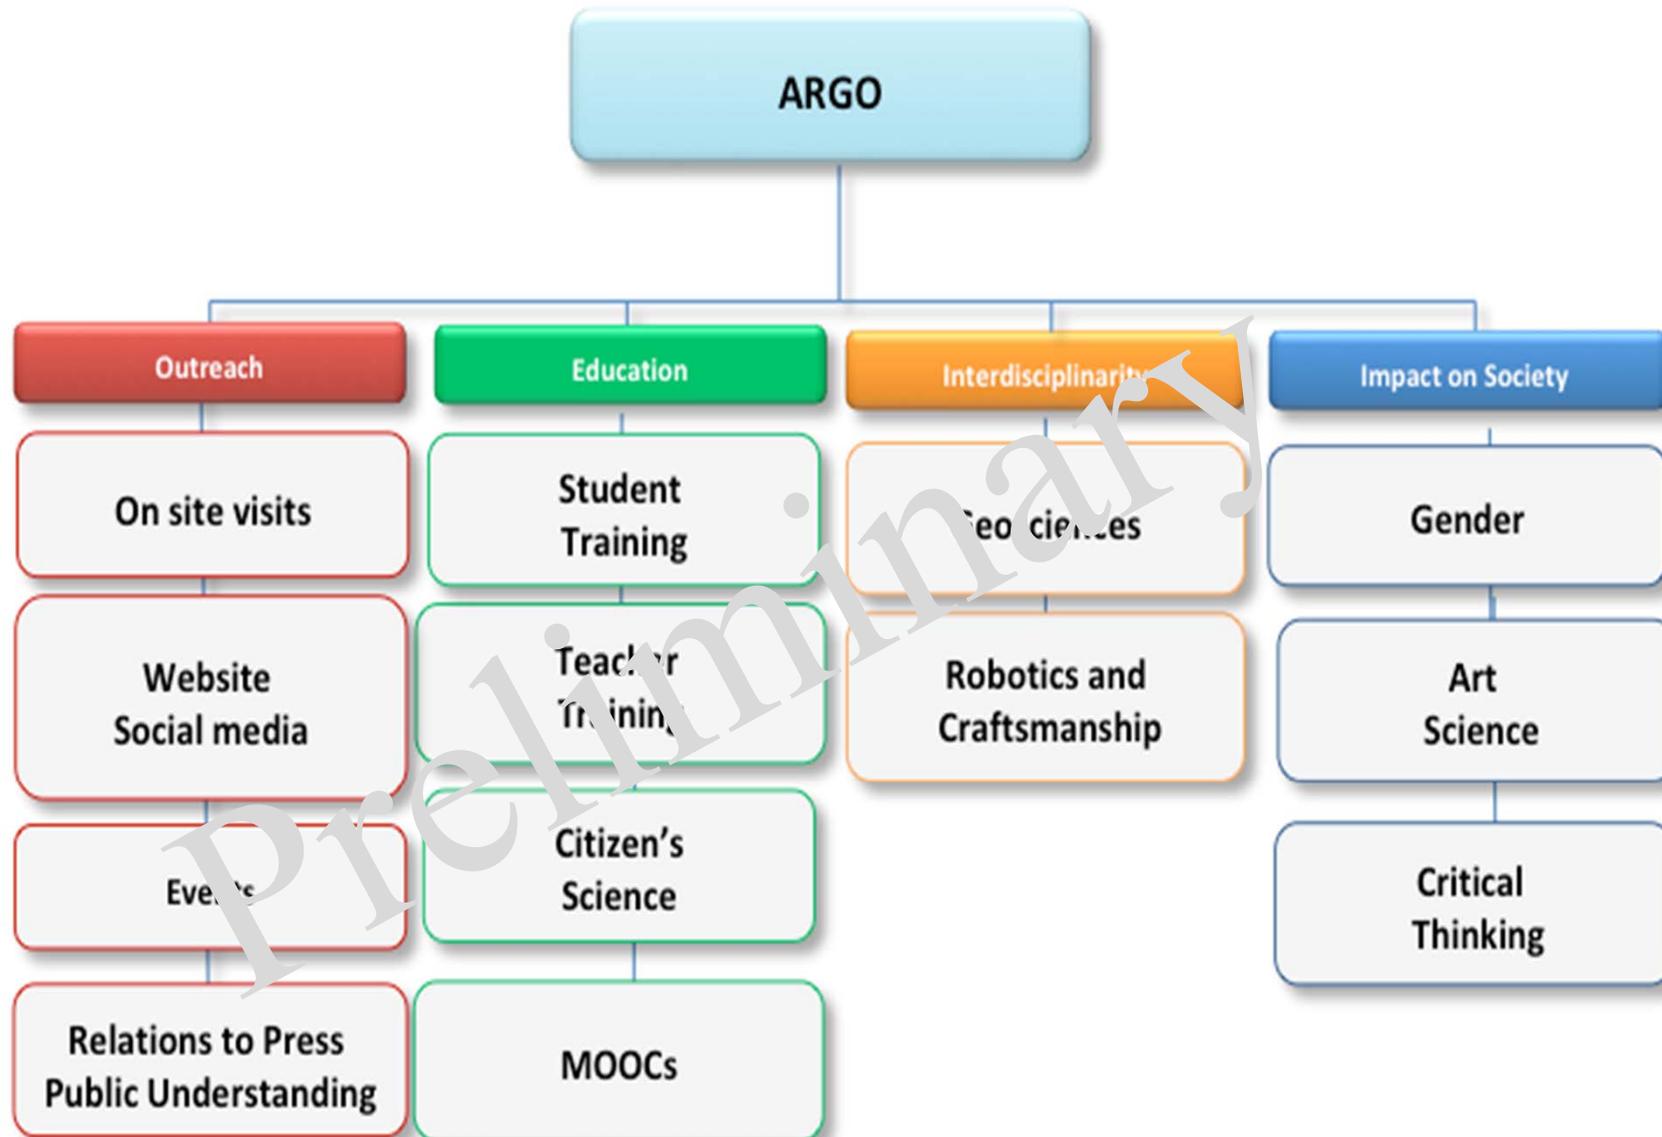

***[EGO]** ensures the construction of the antenna Virgo, its operation, maintenance and the upgrade of the antenna as well as its exploitation. It ensures the maintenance of the site infrastructures, including a computer center and promotes an open cooperation in R&D.*

- 50 people, 10 M€ yearly budget

# Education and Outreach

- **ARGO**: Art and Research of Gravitational Observation

# Visits

- **Number of visitors doubling every year!**
  - Additional load on the people on-site
  - Commitment to be open to the general public
- Geographical origin
  - 40% Tuscany
  - 40% Italy, outside Tuscany
  - 20% abroad

→ More and more requests from higher education and/or distant groups
- Open days
  - Example: the **European Researchers' Night**  
→ Next Friday

## Number of visitors @ EGO

**La notte europea dei ricercatori 2018**  
European Gravitational Observatory

28 Settembre 2018

**BRIGHT 2018**  
LA NOTTE DEI RICERCATORI IN TOSCANA

[public.virgo-gw.eu/Bright2018](http://public.virgo-gw.eu/Bright2018) [www.virgo-gw.eu](http://www.virgo-gw.eu)

**11:00 Un caffè insieme a Marica Branchesi**

- Incontra Marica Branchesi ed altre personalità della ricerca delle onde gravitazionali di Virgo
- Un caffè insieme a M. Branchesi, A. Bozzi, J. Casanueva, C. De Rossi, I. Fiori, S. Katsanevas, M. Mantovani.
- A cura di P. Antolin e I. Marini.
- Luogo: Auditorium Liceo Scientifico 'U. Dini', via B. Croce 36, 56125 Pisa
- **POSTI LIMITATI**

**15:30 Tour di Virgo**

- A cosa serve Virgo? Come funziona? Vieni a visitare Virgo. Il grande orecchio che ascolta il suono dell'universo!
- Con la partecipazione di V. Boschi, C. Bradaschia, V. Dattilo, I. Fiori.
- Luogo: European Gravitational Observatory, via E. Amaldi, 56021 Cascina (PI)
- **POSTI LIMITATI**

**16:00 Gelato Criogenico**

- Cosa possono avere in comune l'interferometro Virgo e il gelato? L'azoto liquido! Scoprire il perché durante una degustazione alla gelateria criogenica.
- Con la partecipazione di A. Pasqualetti, D. Sentenac e la Gelateria De' Cottelli
- Luogo: European Gravitational Observatory, via E. Amaldi, 56021 Cascina (PI)

**16:00 Stampa 3D**

- Cosa ci fa a Virgo una stampante 3D?
- Con la partecipazione di A. Buggiani
- Luogo: European Gravitational Observatory, via E. Amaldi, 56021 Cascina (PI)

**16:00 Informatica senza computer**

- Si può capire l'informatica senza usare i computer? Scoprirlo giocando con noi.
- Con la partecipazione di R. Cavalieri
- Luogo: European Gravitational Observatory, via E. Amaldi, 56021 Cascina (PI)

**16:00 Osservazioni astronomiche**

- Associazione astrofili di Pisa e Cascina
- Luogo: European Gravitational Observatory, via E. Amaldi, 56021 Cascina (PI)

**18:00 Seminario "Light is life"**

- Vieni a scoprire come la luce influenza la vita.
- Con la partecipazione di M. D'Andrea
- Luogo: European Gravitational Observatory, via E. Amaldi, 56021 Cascina (PI)

**19:00 Apericena con Marica Branchesi**

- Tutto quello che avresti sempre voluto sapere ma non hai mai osato chiedere. Prendi un aperitivo con Marica!
- Luogo: European Gravitational Observatory, via E. Amaldi, 56021 Cascina (PI)
- **POSTI LIMITATI**

**21:00 Music and Science Concert**

- Musica e scienza si incontrano con l'ensemble barocco il Rossignolo.
- Con la partecipazione di V. Boschi, il Rossignolo
- Luogo: European Gravitational Observatory, via E. Amaldi, 56021 Cascina (PI)
- **POSTI LIMITATI**

**22:00 Osservazioni astronomiche**

- Associazione astrofili di Pisa e Cascina
- Luogo: European Gravitational Observatory, via E. Amaldi, 56021 Cascina (PI)

Alcuni eventi hanno un numero limitato di posti disponibili. La prenotazione è obbligatoria  
Un servizio di bus navetta gratuito con partenza dalla stazione FS Pisa Centrale per EGO sarà messo a disposizione dei visitatori

# 1916-2018: a century of progress

- **1916: GW prediction (Einstein)**

## **1957: Chapel Hill Conference**

- **1963: rotating BH solution (Kerr)**

- **1990's: CBC PN expansion**  
(Blanchet, **Damour**, Deruelle, Iyer, Will, Wiseman, etc.)

- **2000: BBH effective one-body approach** (Buonanno, **Damour**)

- **2006: BBH merger simulation**  
(Baker, Lousto, Pretorius, etc.)

*Theoretical developments*

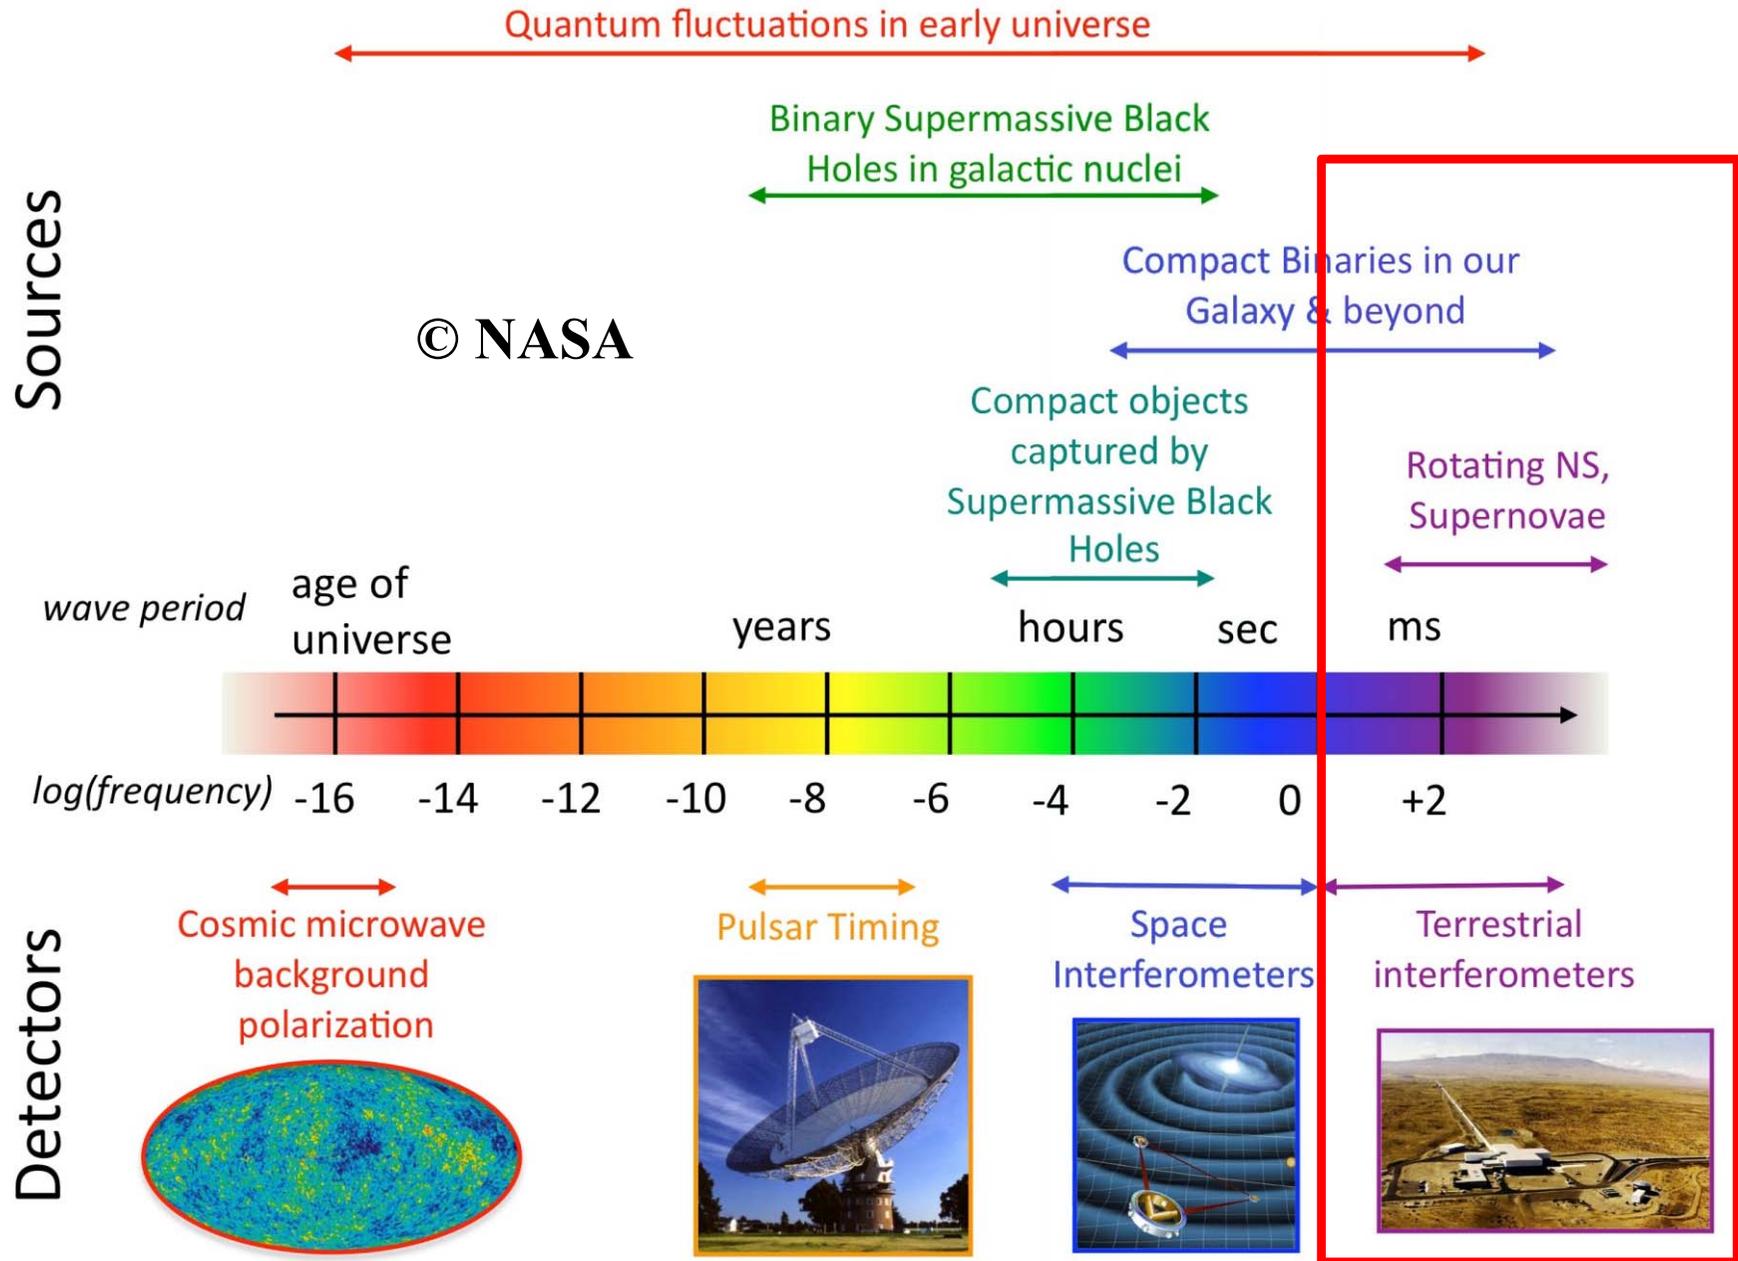

*Experiments*

(Bondi, Feynman, Pirani, etc.)

- **1960's: first Weber bars**
- **1970: first IFO prototype** (Forward)
- **1972: IFO design studies** (**Weiss**)
- **1974: PSRB 1913+16** (Hulse & Taylor)
- **1980's: IFO prototypes (10m-long)**  
(Caltech, Garching, Glasgow, Orsay)  
→ **End of 1980's: Virgo** (**Brillet, Giazotto**)  
and **LIGO proposals**
- **1990's: LIGO and Virgo funded**
- **2005-2011: initial IFO « science » » runs**
- **2007: LIGO-Virgo MoU**
- **First half of the 2010's: Upgrades**
- **2015: First Advanced LIGO run**
- **2017: First Advanced Virgo run**

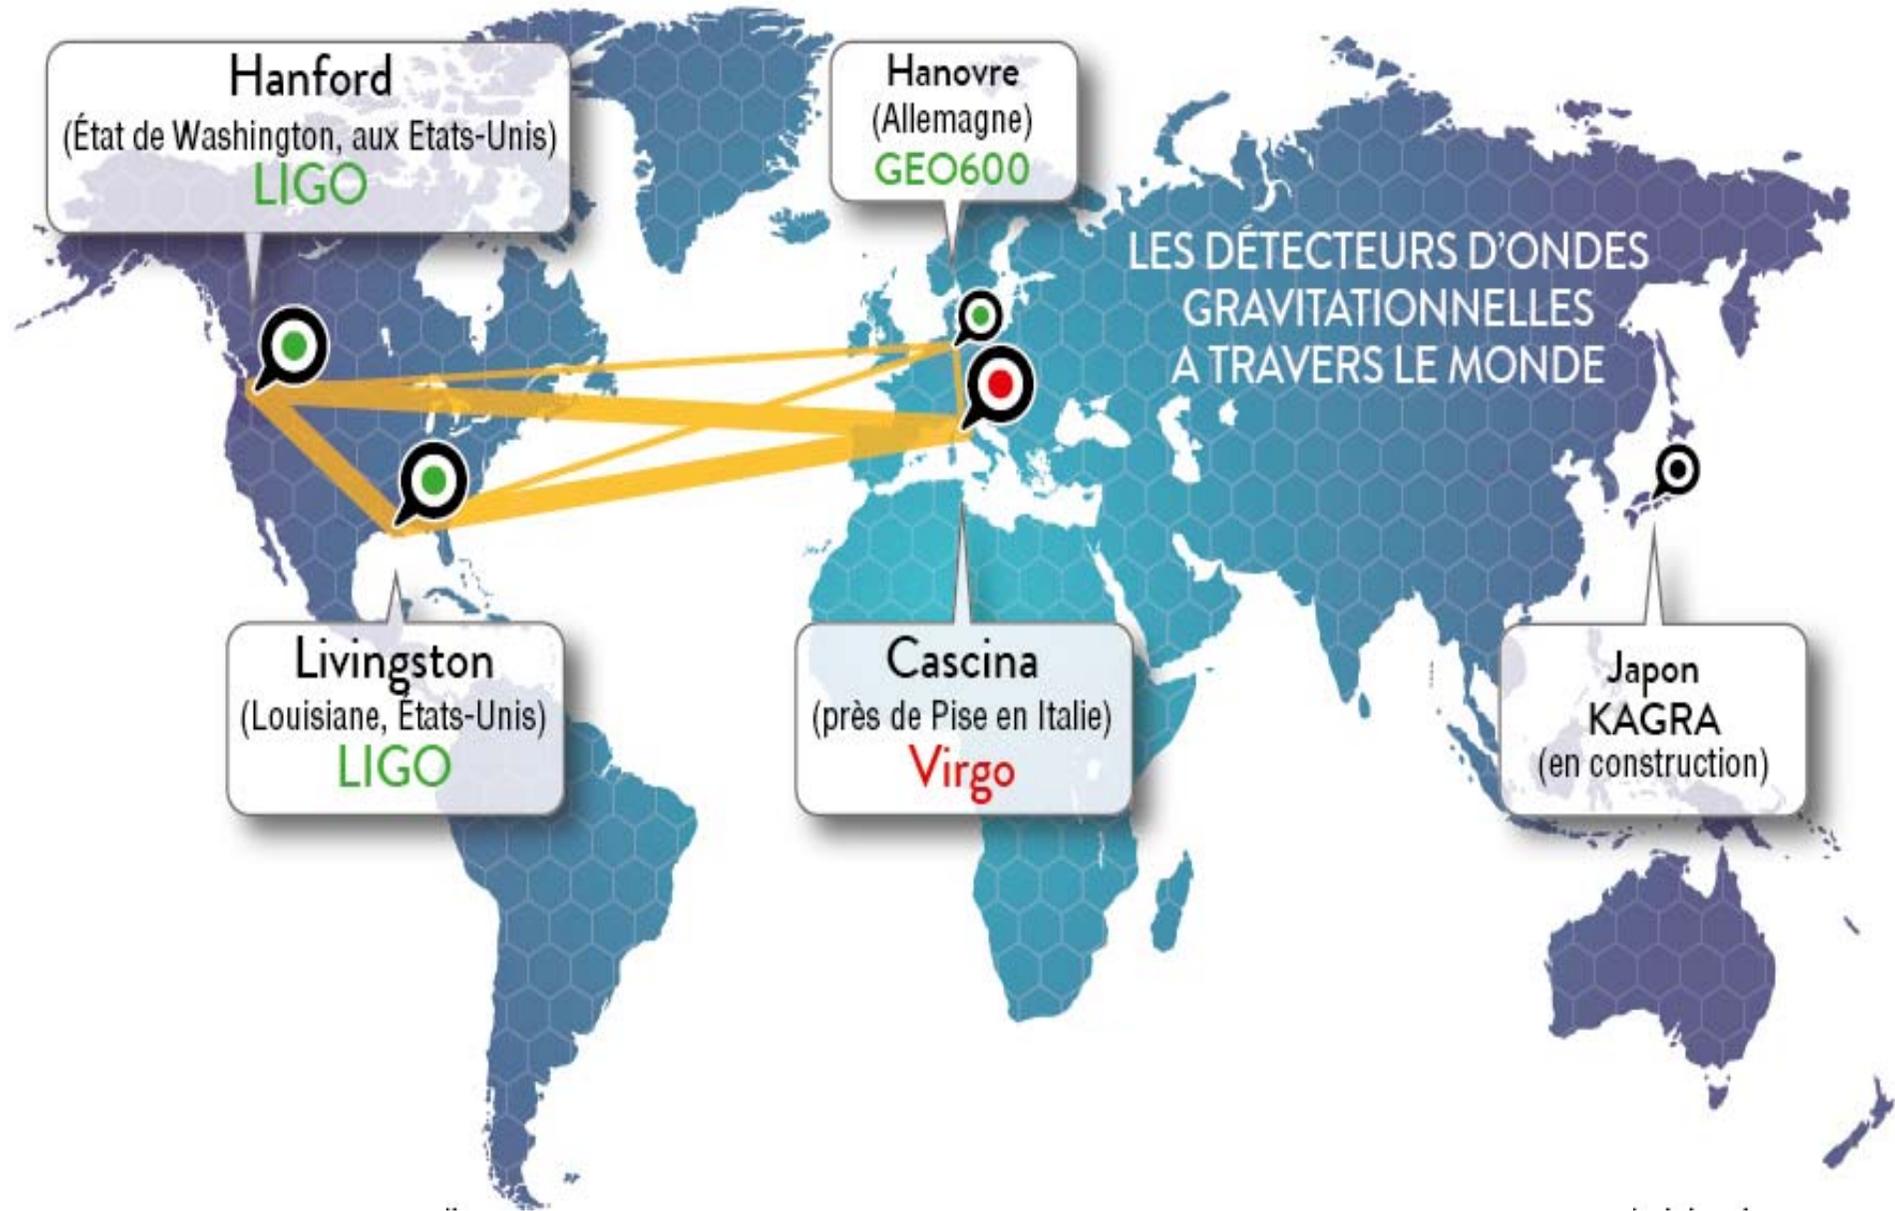

**First GW  
Detections**

# Gravitational wave spectrum

LIGO, Virgo, etc.

# A network of interferometric detectors

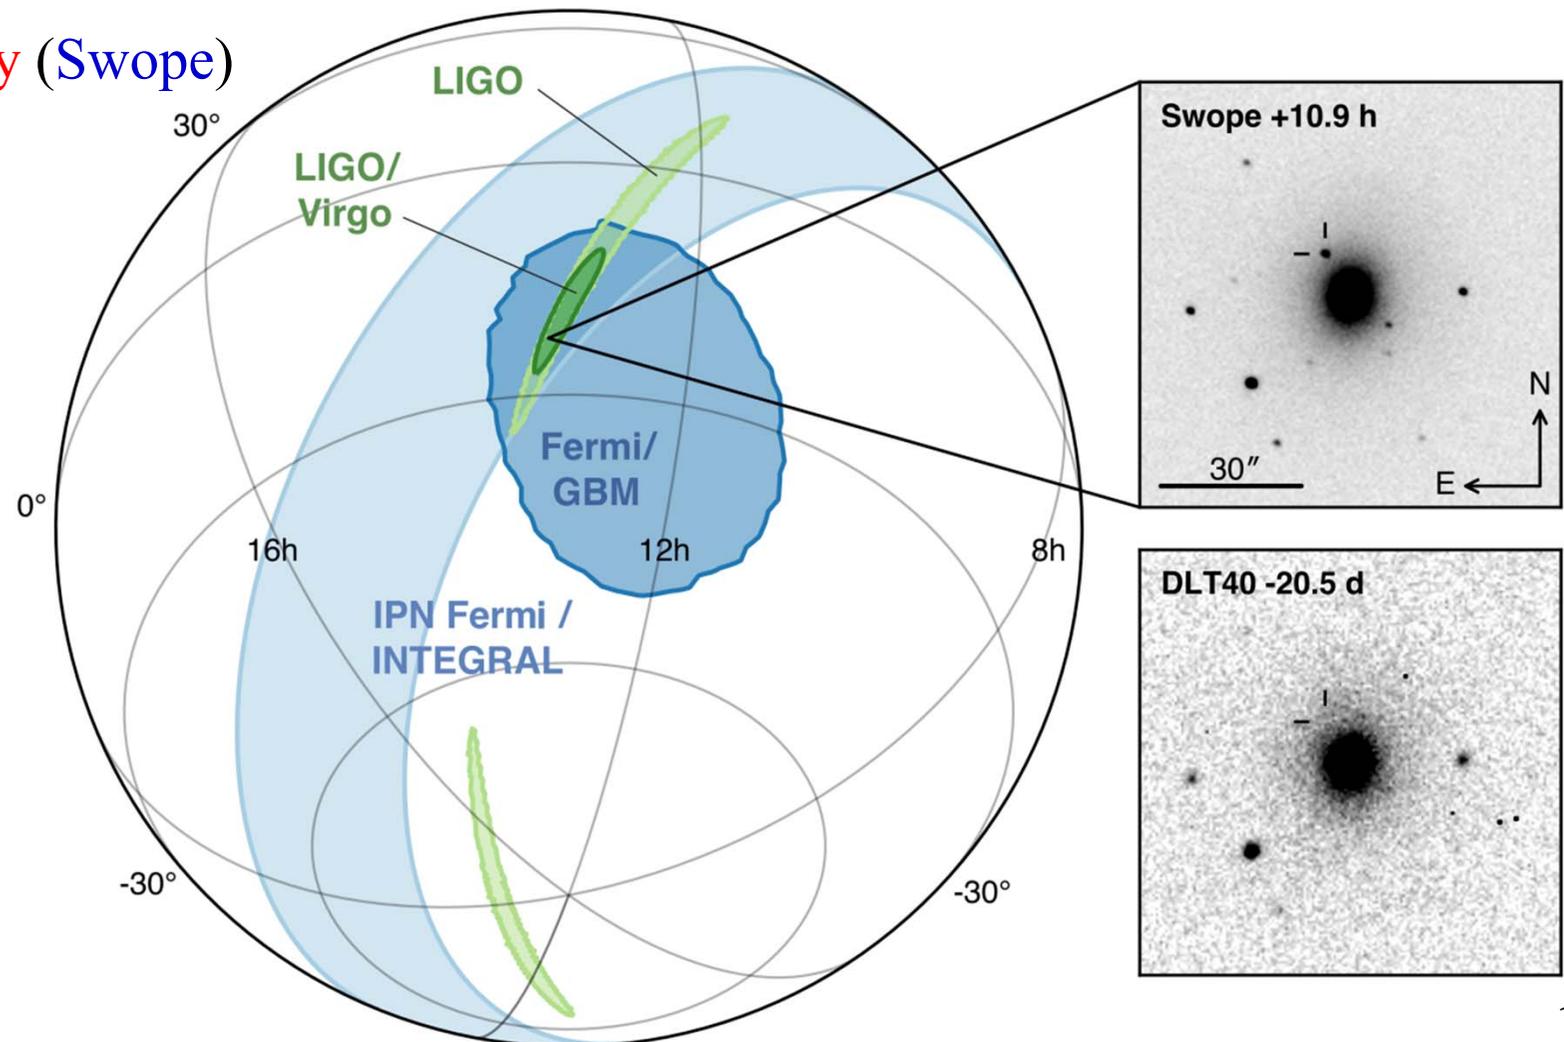

# A network of interferometric detectors

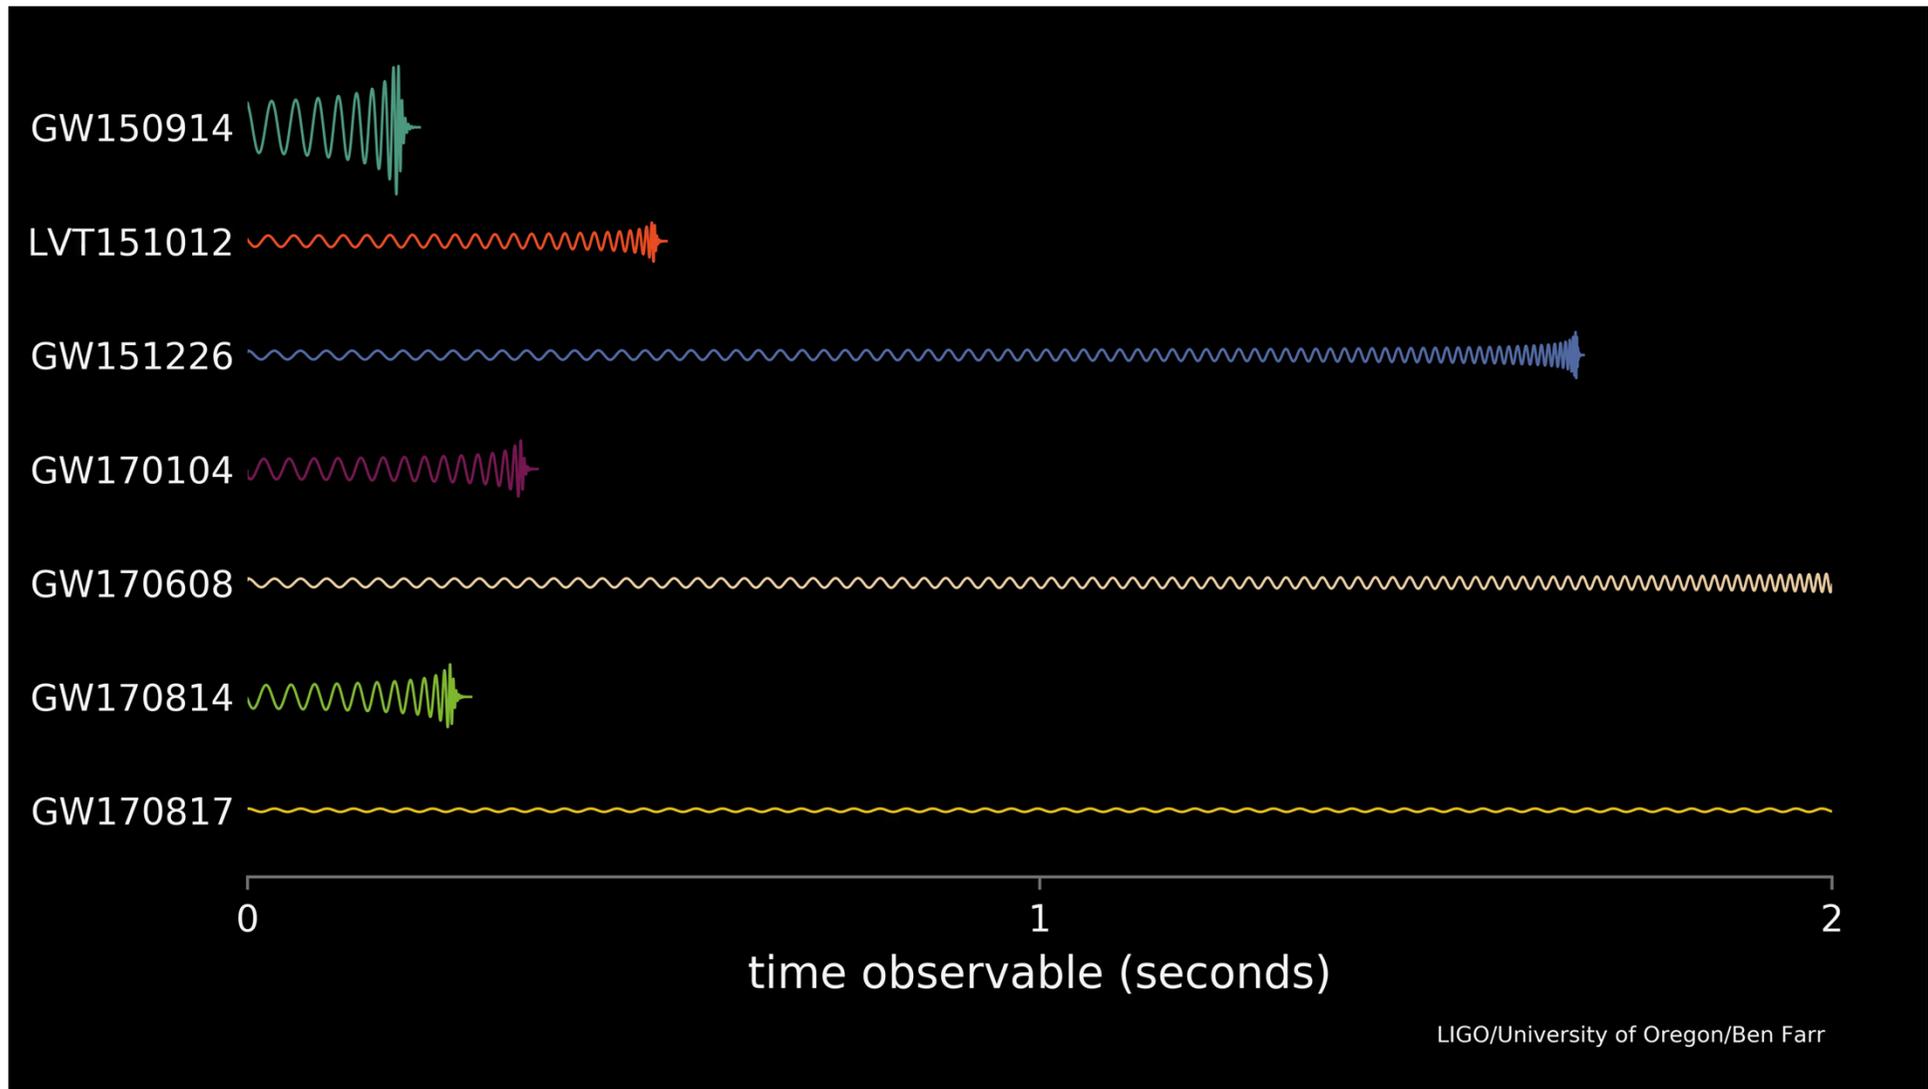

# GW170817: sky localizations & source position

- **Green:** LIGO and **LIGO + Virgo**
- **Blue :** information from **gamma ray burst satellites**
- **Optical discovery (Swope)**

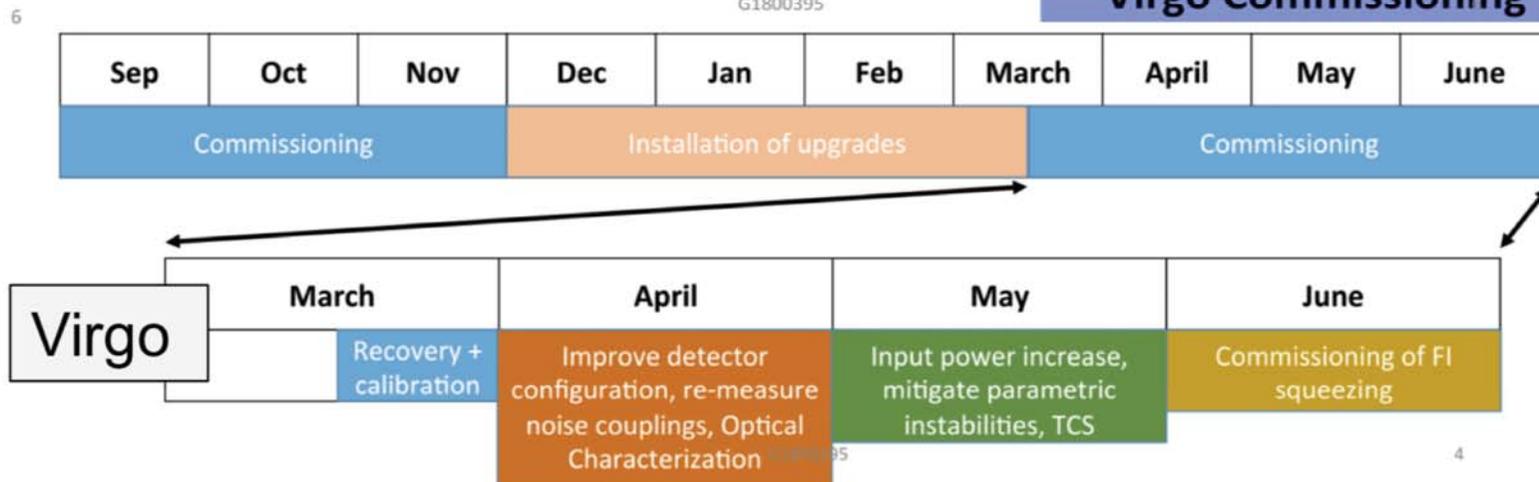

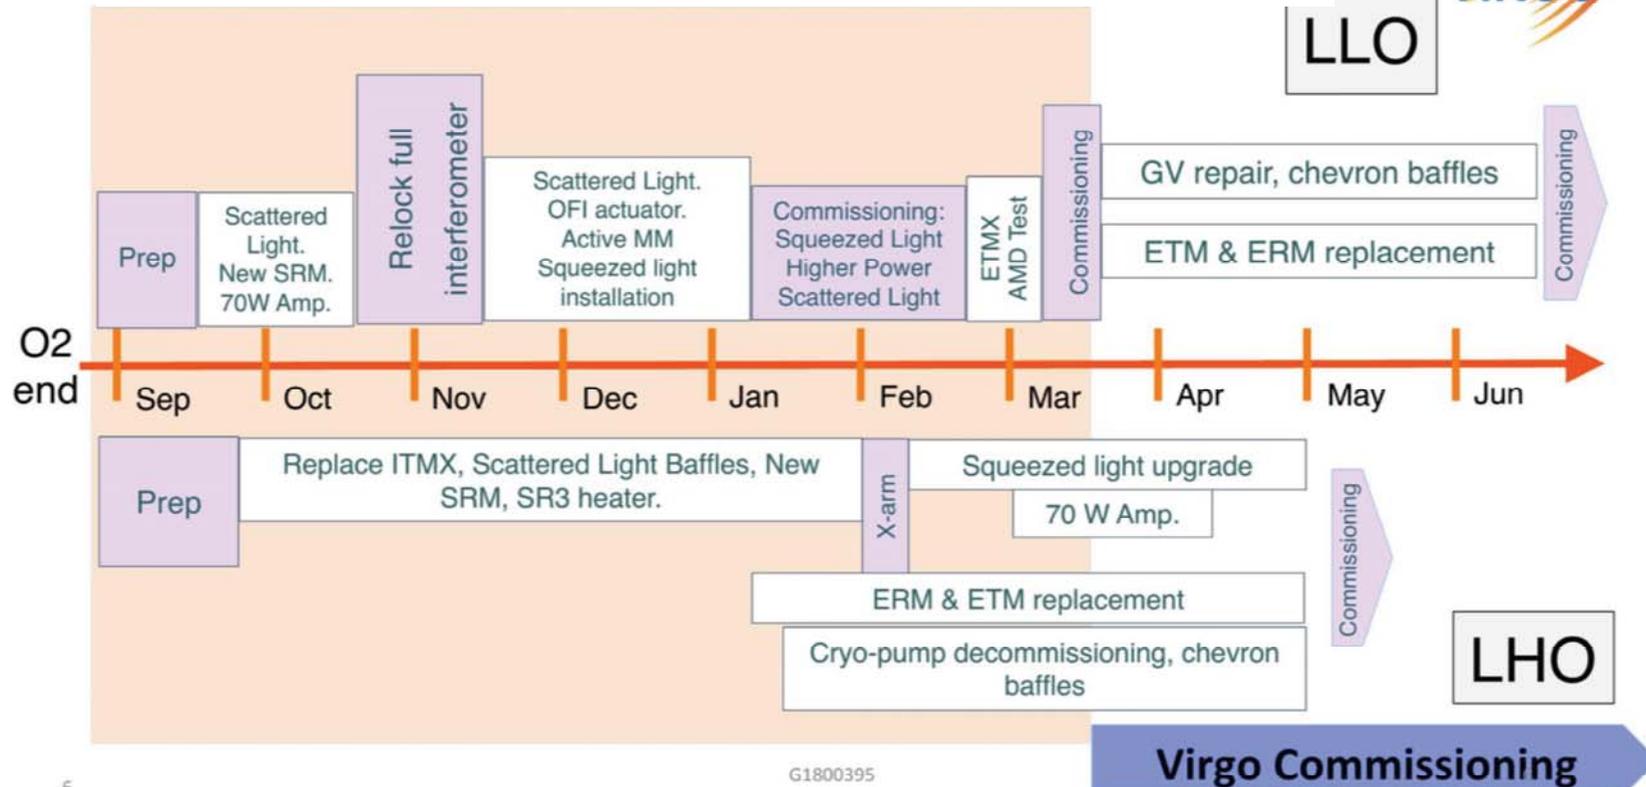

# Detections

- **Five binary black hole coalescences**
  - GW150914, GW151226, GW170104, GW170814, GW170608
- **One neutron star coalescence: GW170817**

# One year-long LIGO-Virgo shutdown

# One year-long LIGO-Virgo shutdown

- **Hardware upgrades**

- **Virgo**

- High-power laser (up to 60W)
- Monolithic suspensions
- Vacuum system
- Frequency-independent squeezing

- Installation of an array of seismic sensors to measure the Newtonian noise

- **Technical and environmental noise hunting**

- Use experience gained during the commissioning and O2 data taking phases
- Improve/tighten detector control

- **Virgo**

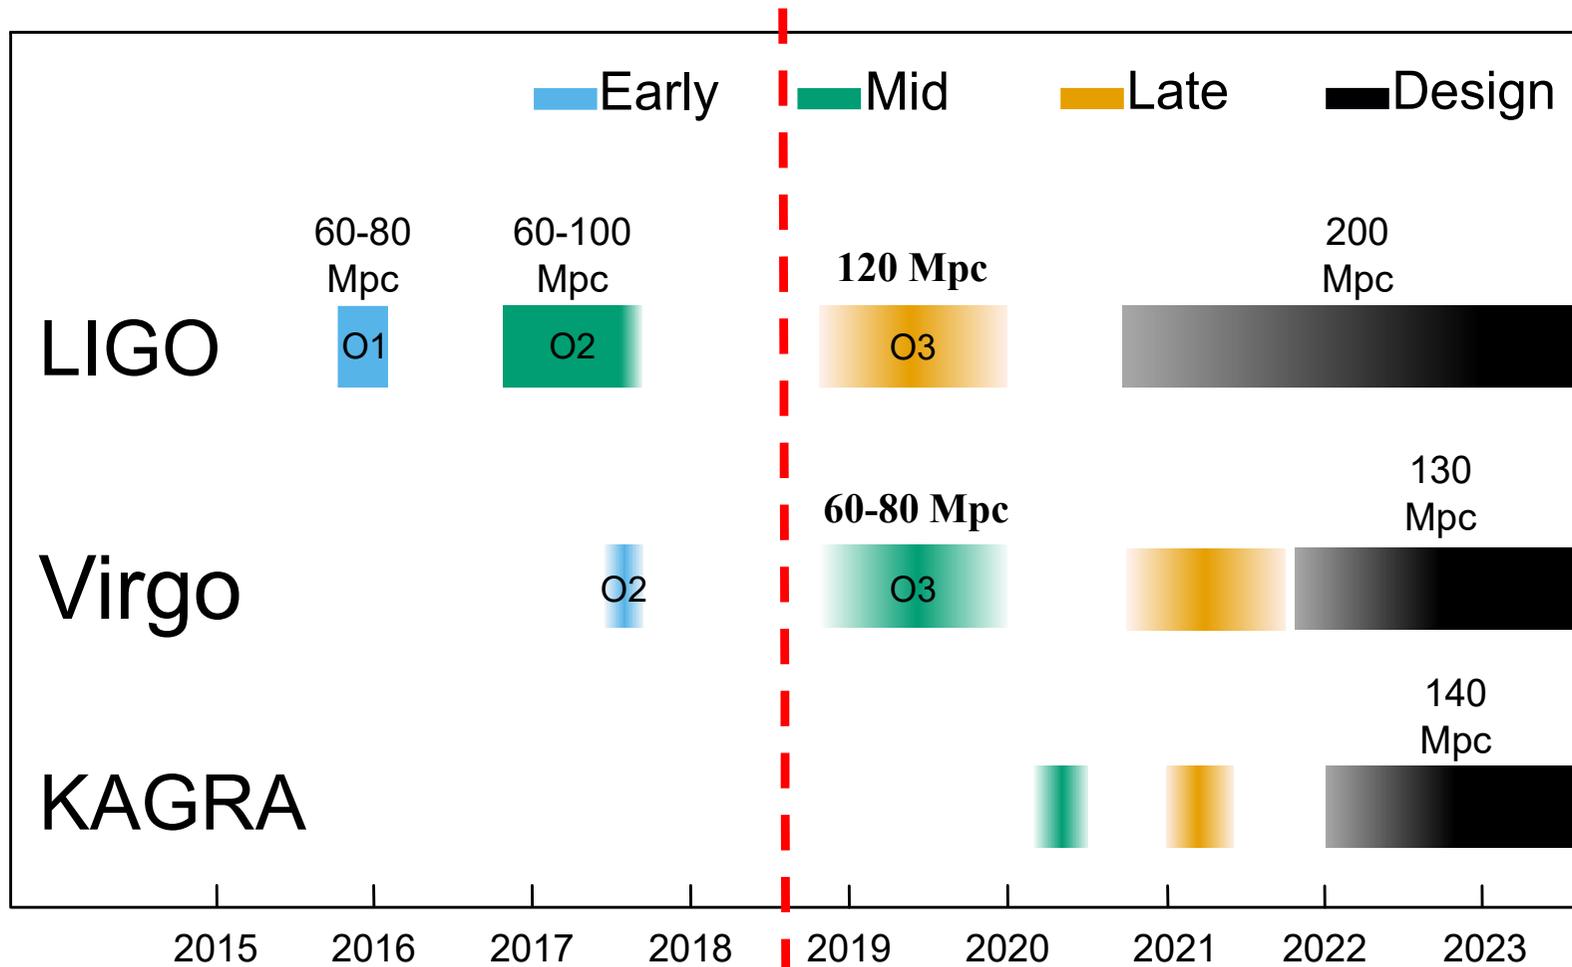

- Post-O2 commissioning phase until early December 2017
- Hardware upgrades until mid-March 2018
- Then back to commissioning until next Fall
  - ◆ **Work still in progress to get back to O2-like sensitivity levels**

- **O3 run** will start end of 2018 (or early 2019) with the **three detectors online**

- **Sensitivity target** (BNS range, see next slide): **LIGO / Virgo = 120 / 60-85 Mpc**

# Observing scenario

- Sensitivity improvement over time
  - Expressed in terms of « Binary Neutron Star (BNS) range »
    - Sky-averaged distance up to which one can detect a BNS merger @ SNR = 8

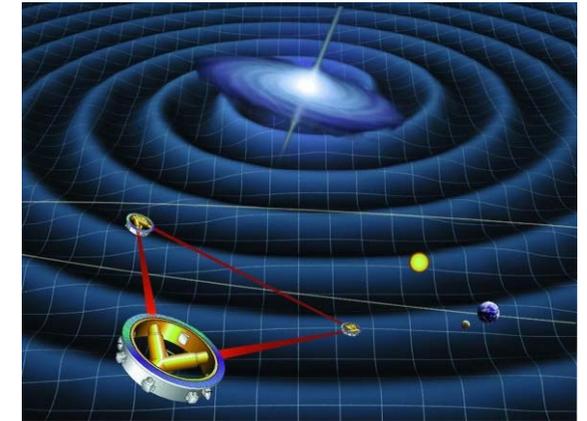

# On the longer term

- **Upgrades post-O3**

- Newtonian noise cancellation
- Frequency-dependent squeezing
- Signal recycling
- Full-power laser (up to 200 W)

→ **Virgo sensitivity goal:  $\sim 160$  Mpc**

- **After O4 (mid-2022): « Advanced Virgo + »**

→ Make the best possible use of the existing infrastructure

- Larger mirrors
- Improved coating

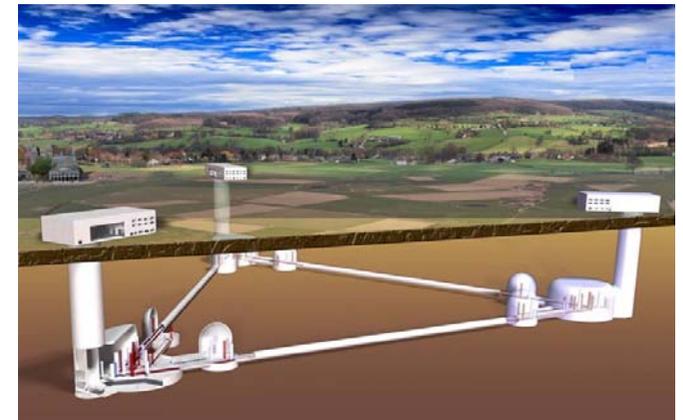

→ Reduce thermal noise

→ **Sensitivity goal:  $\sim 300$  Mpc**

- Launch of the **LISA** space mission scheduled for **2034**

- **Einstein Telescope**: around **2035**

- **Third-generation** interferometric gravitational-wave detector

# GW detector peak sensitivity evolution vs. time
